DISCLOSURES & INDEX DEFINITIONS

The performance quoted herein represents past performance for Institutional Class (STMEX). For performance numbers to the most current month end, please call toll-free 1-844-727-1813 or visit our website, sierramutualfunds.com. Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate, so that an investors' share, when redeemed, may be worth more or less than their original cost.

The indices shown are for informational purposes only and are not reflective of any investment. It is not possible to invest in an index. The data shown does not reflect or compare features of an actual investment, such as its objectives, costs and expenses, liquidity, safety, guarantee or insurance, fluctuation of principal or return, or tax features. Past performance is no guarantee of future results.

The **Bloomberg Municipal Bond Index** is an unmanaged index composed of long-term tax-exempt bonds with a minimum credit rating of Baa. It is considered representative of the broad market for investment grade, tax-exempt bonds with a maturity of at least one year.

Morningstar® High-Yield Muni Category portfolios invest at least 50% of assets in high-income municipal securities that are not rated or that are rated by a major agency such as Standard & Poor's or Moody's at the level of BBB (considered speculative in the municipal industry) and below.

IMPORTANT FUND INFORMATION OR FUND RISKS:

Past performance is not indicative of future results and there is no assurance that any strategy will achieve its investment objective.

Investors should carefully consider the investment objectives, risks, charges, and expenses of the Sierra Mutual Funds. This and other information about the Fund is contained in the prospectuses and should be read carefully before investing. The prospectuses can be obtained by visiting sierramutualfunds.com or by calling toll free 1-866-738-4363 (1-866-RETI-FND). The Sierra Mutual Funds are distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Ocean Park Asset Management, LLC is not affiliated with Northern Lights Distributors, LLC.

The Sierra Tactical Municipal Fund invests in underlying funds and ETFs that may invest in tax-exempt municipal bonds, as well as municipal money market funds. "Tax exempt" refers to the exemption from federal income taxes of the dividends paid by the Underlying Funds, a benefit that will be passed through to shareholders as to ordinary dividends from the Fund. In general, the price of a fixed income security falls when interest rates rise. Underlying Fund investments in lower-quality municipal bonds, known as high-yield or junk bonds, present greater risk of default than bonds of higher quality. Municipal securities are subject to the risk that legislature changes and economic developments may adversely affect the value of the Fund's investments. Shares of ETFs may trade at a discount or a premium in market price if there is a limited market in such shares and are also subject to brokerage and other trading costs, which could result in greater expenses to the Fund. In some instances, it may be less expensive for an investor to invest in the Underlying Funds directly.

The benchmark for the Sierra Tactical Municipal Fund is the Bloomberg Municipal Bond Index, a broad-based flagship benchmark that measures the investment grade, U.S. dollar-denominated, fixed-rate taxable bond market.

TERMS & DEFINITIONS:

Standard Deviation is a statistical concept used in investment management to measure risk for the variability of return of a fund's performance. A high standard deviation represents a greater risk.

Sharpe Ratio uses standard deviation to measure a fund's risk-adjusted returns. The higher a fund's Sharpe Ratio, the better a fund's returns have been relative to the risk it has taken on.

Downside Deviation is a risk statistic measuring volatility. It is a variation of Standard Deviation that focuses only upon the "bad" volatility.

Sortino Ratio is a modification of the Sharpe Ratio that differentiates harmful volatility from general volatility by taking into account the Standard Deviation of negative asset returns, called Downside Deviation.

Max Drawdown is an indicator of the risk of a portfolio chosen based on a certain strategy. It measures the largest single drop from peak to bottom in the value of a portfolio (before a new peak is achieved) using month-end data.

Max Drawdown Recovery Length is the number of periods it takes to reach the recovery level from the longest drawdown end date.
